What is a PET Scan?

~"PET" stands for Positron Emission Tomography~

a PET scan is a visual test allowing doctors to check for diseases; as well as see how your organs and tissues are working.

PET Scan Machine

PET scans are able to diagnose or determine:

- Cancer
- Alzheimer's disease
- Epilepsy
- Heart disease or problems that occur to your heart after a heart attack

PET scans are used to measure the flow of blood, oxygen use and glucose metabolism (seeing how your body handles sugar)

When would a PET Scan be recommended?

Your doctor would recommend a PET scan to detect any problems with your body.
