*Why did NASA
develop satellite
communication?*

Thecasesolutions.com

Thecasesolutions.com

NASA developed satellite communication for the purpose of making advances in telecommunication.

Echo 1

NASA's first communication satellite

Thecasesolutions.com

Echo 1 was a satellite designed as a balloon created by an engineer at the Langley Research Center, launched in 1960. The satellite measured 100 feet (30 meters) in diameter. Once in orbit, residual air inside the balloon expanded, and the balloon started its mission; to reflect radio transmissions from one ground station back to another. Echo 1 intrigued several people because it could be seen with the naked eye from the ground.
