The internet is responsile today's world. It has allowed to manies without a lot google, which has growed ollar enterprise. Google and thanks to the internenterprise. Google has a billion dollars as a completernet, Google would internet, Google would internet, Larry Page and penniless.

#### Describe it

#### Thecasesolutions.com

With computers we can do things we could never do before. Our world is changing so swiftly and almost every day there is a new piece of of gear. Things are faster, smaller, and easier to use all the time. We can connect with people across the world and make an alloy of everyone's Ideas, which just leads to more technological advancement.

## Compare it

#### Thecasesolutions.com

If you have ever read Orson Scott Card's Ender's Game, then you would know the alien race known as the Buggers. Their brains are all connected and they share thoughts. This is a great deal like the internet. A bunch of brains connected to each other sharing strategies and information. A big difference is the queen. Computers are like a bunch of intelligences connected whereas the buggers are a bunch of halfwits connected to the queen.

#### Associate it

#### Thecasesolutions.com

The internet is responsible for so many things in today's world. It has allowed people to start up companies without a lot of money, such as Google, which has grown into a multi-billion dollar enterprise. Google started out of a garage, and thanks to the internet, has become a major enterprise. Google has accumulated over 200 billion dollars as a company. Without the internet, Google would never had existed. It's founders, Larry Page and Sergey Brin would be penniless.

## Analyze it

#### Thecasesolutions.com

The internet, while being responsible for many good things, is not flawless. One of the internet's problems is piracy and hacking. Since the internet is readily available to most it can be difficult to make a secure account on it, especially with people being lazy with their passwords. So with all of this money and product stored online some people are bound to take it. It is good to always have money available to you but everything has a catch.

## Apply it

## Thecasesolutions.com

With all of this connectivity ideas can be shared, found, and shared so easily and before you know it there is a new trend or celebrity being discovered. People can communicate to develop new technologies and ideas causing technology to grow faster and faster. We can share news and research findings and create presentations like this. It is also useful for entertainment and connecting to your friends.

# Argue For or Against It

### Thecasesolutions.com

There are many pros and cons to the Internet. We, however, argue for the Internet. It allows surgeries to be completed across the world, where without it, the family not able to pay the surgeon to travel across the world would die. Another pro is that it allows for the worldwide sharing of information, so it is better for the financially challenged to learn. There are groups like Khan Academy, which offer free educational videos which can be accessed by anyone. In past times people would have to buy costly textbooks and not be able to ask questions.
