Advanced Practice*
TheCaseSolutions.com

- Promotes patient/provider collaboration.
- Allows patients to enter important information into the application (medical information, medications, daily activity, vital signs, notes).
- Tracks patients progress.

Transforming Advanced Practice

TheCaseSolutions.com

- Aides in managing chronic conditions such as: diabetes and hypertension.
- Can provide the provider with a daily log of vital signs such as blood glucose levels or blood pressures.
- Enables the provider to adjust medications accordingly based on the vital sign trend.

Benefits & Limitations

TheCaseSolutions.com

Twine Health	Advantages	Disadvantages
Patient	One place to store information related to their health and medical history.	This may be difficult for older patients to embrace, as they have often kept written records of their health and medical history. They may have a hard time entering information into a computer application, may not own a computer or a smart phone.
	One place to put questions, concerns, pictures, etc. to show the healthcare provider.	Risk for patient privacy breach.
Provider	A place to see vital signs such as: blood glucose levels, blood pressures on your patients. This can provide a more comprehensive vital sign trend for the managing provider. (Twine Health, 2016).	Expensive for the facility to purchase the Twine Health application system. (Menachemi & Collum, 2011).
	Provide better patient care.	Decreased revenue for the facility. The better chronic conditions are managed; the less frequent patients will be making office visits. (Menachemi & Collum, 2011).
	Decreased costs in treating and managing chronic health problems. The better a chronic condition is managed, the less likely a patient will require hospitalization. (Menachemi & Collum, 2011).	

Systems Input

TheCaseSolutions.com

- Data can be entered into twine health.
- Data can include: health history, medications, appointments, vital signs, notes, activity log, goals and goal progress

Systems Output

- Twine health can serve as one place to store information.
- This can be helpful in managing chronic conditions.
- Daily logs of blood pressures or blood glucose levels can be kept for a provider to go back and review.
