

Mobile phone surveillance in Mexico

- In Mexico, in favor of people born of an adjacent to heat taxes are double as a tax system and coverage elsewhere officials
- Facilitates systems for military personnel as well as 90 percent of coverage services in Mexico
- Many Mexican citizens do not have cell phones and are not aware of the current progress here, as well as the current military situation at risk
- Keeping the status of events like an article and affecting risk in their own security

- mobile phone systems allows users to send messages and change free SMS, text or audio recordings
- this invention of state surveillance will help safety outside violent Military personnel and citizens

- Ricardo Dominguez
- Mobile application helps immigrants cross the Mexican/US border.

Google Earth and Darfur

THE BUREAU OF INVESTIGATION (BOI) and other government agencies with the National Security Agency (NSA) and the United States National Security Agency (NSA) have a long history of using Google Earth to monitor and track the movements of individuals and groups, including those involved in terrorism and other security concerns.

• Making "Google" global performance support their position and agency and/or change

Responding to Disaster : The need for Dataveillance

<http://www.usahidi.com/about>

- Haiti
- lacked the databases of mobile phone computers to send medical data between doctors, patients volunteers.
- Chile Haiti
- geo-positioning devices helped find missing persons in the earthquake rubble
- Kenya election rig
- reported the events
- government held responsible
- resulted in increased government transparency

Instant crowd-sourcing upload maps, video, internet

- in the case of Haiti quake these before and after images were highly trafficked.
- The most viewed images in Google over 100 million views.
- Raising hundreds of thousands of dollars and hours of manpower

The Gate for 'Benevolent' Mobile Apps

...to TELEPHONE, PRIVACY, CONTACT.

IN CONCLUSION

not victims but agents

Surveillance has invaded our society - its impact not always positive. However as artists, activists, and consumers continue to push back against the institutionalization of surveillance perhaps they can look for back-routes of possibility that technologies of surveillance have hacked for us. Perhaps we can mobilize a rebellion not to negate "the big brother state" but instead to generate positive social change in the surveillance milieu.

"In the beginning was the Word, and the Word was with God, and the Word was SATELITE IMAGING

- The remote sensing component finds where people live using image recognition on satellite imagery

By economic and operations research companies use demographic and pricing models to project electricity demand, not just for energy.

THE BENEFITS:

- Democratizes the complicated and proprietary process of building communication infrastructure
- Remote Geo-sensing technologies can help in disaster
