Introduction

Pavement is the durable surface material laid down on an area intended to sustain vehicular or foot traffic, such as road or walkway.

In the past, cobble stones and granite setts were extensively used, but these surface have mostly been replaced by asphalt or concrete.

There are to types of pavements:

Flexible pavement

Rigid pavement

Thecasesolutions.com

Flexible pavement

Is composed of bituminous material surface course, underlying base and sub base course.

Flexible pavement structure is typically composed of several layers of materials.

Each layers receives loads from the above layer, spreads them out and passes on these loads to the next layer below.
