Kelly Wang

ENG4US

April 27 2016

Step 1

Trait that will be destroyed: Mental stability of Betas, Gammas, Deltas, and Epsilons.

Who it benefits: Alphas, the government.

Reasoning: Lower classes will have an increase in mental illness, they will take more soma, decreasing proper thinking, government takes advantage of lower class people.

Step 5

With the excessive use of soma in the lower classes, the Alphas are able to stand their ground and become more powerful than they already are. The processes of embryonic manipulation, neo-pavlovian conditioning, and hypnopædia will develop a clearer version of the five classes in the Brave New World society. Each class will play an important role in the society of the Brave New World and create a temporary mental stability for the lower classes. The increase of mental illness in the lower classes will especially increase the power of the government which eventually benefits all classes, mostly the Alphas. Economic and political issues are to be solved much quicker without the negative opinions of the Brave New World because it solves large national problems along with personal issues.

#TeamSOMA

Step 2: Embryonic Manipulation

Manipulation stages:

- 1. Genetic engineering
- 2. Chemical manipulation
- 3. Psychological manipulation
- 4. Environmental manipulation

Benefits of Manipulation:

- 1. Increased productivity
- 2. Decreased mental illness
- 3. Increased social stability
- 4. Increased government control

Step 4- Hypnopædia

Hypnopædia: Keep it short and sweet, and use repetition. According to Pavlov's Theory of Mind, humans react oppositely to what they are told (rebellion).

The Actup

I will be what I am not and what I am not.

Step 3 Neo-Pavlovian Conditioning

Instructions

Setup: 1. 500-600 Hz tone, 10-15 seconds, 10-15 times.

Procedure:

1. Prepare equipment.
2. Train the "Huggies bear" as the pre-condition and post-physiological about behavior.
3. Allow the bear to subject to their surroundings (play with the bear, watch TV, etc.)
4. After the bear is comfortable with the surroundings, begin the conditioning process.

Notes: The bear will only affect if the bear is not physically sick and is not stressed.

Step 1

Trait that will be destroyed: Mental stability of Betas, Gammas, Deltas, and Epsilons.

Who it benefits: Alphas, the government.

Reasoning: Lower classes will have an increase in mental illness, they will take more soma, decreasing proper thinking, government takes advantage of lower class people.

Step 5

With the excessive use of soma in the lower classes, the Alphas are able to stand their ground and become more powerful than they already are. The processes of embryonic manipulation, neo-pavlovian conditioning, and hypnopaedia will develop a clearer version of the five classes in the Brave New World society. Each class will play an important role in the society of the Brave New World and create a temporary mental stability for the lower classes. The increase of mental illness in the lower classes will especially increase the power of the government which eventually benefits all classes, mostly the Alphas. Economic and political issues are to be solved much quicker without the negative opinions of the lower classes. The increase of soma will be the basic solution to all the problems in the Brave New World because it solves large national problems along with personal issues.

#TeamSOMA

Step 2: Embryonic Manipulation

Manipulation stages:

- 1. Genetic engineering
- 2. Embryo selection
- 3. Embryo manipulation
- 4. Embryo implantation
- 5. Embryo development

Benefits of Manipulation:

- 1. Increased intelligence
- 2. Increased physical strength
- 3. Increased mental stability
- 4. Increased social skills
- 5. Increased emotional control

Step 4- Hypnopaedia

Hypnopaedia: Keep it short and sweet, and use repetition. According to Pavlov's Theory of Mind, humans react oppositely to what they are told (rebellion).

The Actup

I will be what I am not and what I am not.

Step 3 Neo-Pavlovian Conditioning

Instructions

Setup: 1. Prepare equipment. 2. Place the "Tigger bear" in the preparation room and put psychological about Tigger in the room. 3. Allow the child to subject to their surroundings (play with the bear, watch TV, etc.) 4. After the child is comfortable, the procedure will be repeated by following the procedure.

Procedure:

1. The child will only observe the Tigger bear and physically act out the bear.
2. Allow the child to observe the bear for a few minutes after the "up".
3. When the child is comfortable, the Tigger bear will be placed in the room, and the child will be allowed to interact with the bear.
4. When the child is comfortable, the Tigger bear will be placed in the room, and the child will be allowed to interact with the bear.
5. When the child is comfortable, the Tigger bear will be placed in the room, and the child will be allowed to interact with the bear.
6. The child will be allowed to interact with the bear for 10 minutes.
7. The child will be allowed to interact with the bear for 10 minutes.
8. The child will be allowed to interact with the bear for 10 minutes.

Repeat process with all Beta, Gamma, Delta and Epsilon children.

Step 1

Trait that will be destroyed: Mental stability of Betas, Gammas, Deltas, and Epsilons.

Who it benefits: Alphas, the government.

Reasoning: Lower classes will have an increase in mental illness, they will take more soma, decreasing proper thinking, government takes advantage of lower class people.

Step 2: Embryonic Manipulation

Manipulation Changes

Alphas:

- Treated with care
- Sang to every night through a mini microphone in the test tube
- 5 drops of essential vitamins added into test tube

Betas:

- Treated with care
- No bedtime songs but bedtime stories are read
- 1 drop of essential vitamins

Gammas:

- Treated mostly with care
- No songs or bedtime stories
- No extra vitamins

Deltas:

- 0.05mg soma are added into test tube
- 0.003mg of iron ammonium sulfate (affects health)
- Helium instead of oxygen in test tubes (dizziness in the brain)

Epsilons:

- 0.1mg soma are added into test tubes
- 0.005mg of mercury chloride (affects health)
- Give MORE oxygen to form O3 which adds pressure into head

Results of Manipulation

Alphas: Grow strong, bold, intelligent, confident, a leader, excellent health. Healthy mindset.

Betas: Grow strong, healthy and intelligent, but not as intelligent as Alphas. Mild mental instability.

Gammas: Grow to be regular people; regular health status, average jobs, no special quality. Moderate mental instability.

Deltas: Weak mind and body, low confidence, low-class jobs. Intense mental instability.

Epsilons: Weak mind and body, very low confidence, low-class jobs. Severe mental instability.
