What are Externalities?

Often times the full cost of a good is not paid by the producer and those hidden costs are also not included in the price. However, that cost is still being paid by others, which means that the price of that good is artificially low and is being subsidized by those “others.” These “external” costs (costs external to the company) are called externalities and can be positive or negative.

Negative Consumption Externalities

Positive Consumption Externalities

Negative Production Externalities

Positive Production Externalities

externality is a cost or benefit which
did not choose to incur that

In general, an externality is a cost or benefit which affects a party who did not choose to incur that cost or benefit.
