

Contribution

By having my thesis work done with analysis in megaprojects or megaprojects and risk, I would like to contribute my effort to **interpret the outcome** of megaprojects result in terms financial language and what lessons can be taught through studying the projects.

Main issue

Mega project
Oyu Tolgoi project
The deposit, which consists of
copper, gold, silver and
molybdenum
The total investment for the
Oyu Tolgoi project has now reached
USD 2.2 billion
As a result of the project, Mongolia's
economy is projected for the Oyu
revenue by 2029 and a total annual
expected to grow 35
project is
expected to save from **USD 800 million**
to **USD 200 million**

Purpose/What it is

Megaprojects often bring mega-challenges. Cost and time overruns, obsolete technology, shifting political support and turbulent economic conditions are all frequent distractions that erode from megaproject delivery.

To have analysis, we could measure if the time line in financial terms, positioning or ensuring the **megaproject delivery** low inefficient or harmful it would be in economy of Mongolia. This is for to have a wide range view of value or delivery and successful implementation of project.

My purpose to find out what **sum of money will be invested** behind these obstacles.

Mega projects in

- new railway
- The New Railway Project is a mega project of political, economic, and social impacts in Mongolia
- According to the current estimate, the required investment for the project is **USD 2.2 billion**
- In estimating the project, in total USD 200 million has been approved for the withdrawal from the Chinggis bond through the Development Bank of Mongolia. At of total, some **USD 1.1 billion** has been transferred to the project account.

Motivation

Huge budgets, massive programs, anticipated transformative benefits will impact our quality and quality of environment. As a resident of Morgue, I want to do my own best to **investments** put through infrastructure and underdeveloped mining projects.

Moreover, I would like to examine the **challenges, opportunities and risks** are involved in carrying those involved in creating and operating these important assets.

In The Future

In the future there will be no need to extract oil from the soil, which will help decrease the risk of pollution. The technology for "sandy" oil production is still a few years away from being used. Currently, they expect 1.2 million barrels of oil a day, but that's expected to rise to 5 million barrels of oil a day by 2020.
