## How Cisco IT Implemented Organizational Change.

If Cisco IT SDN uses this organizational structure, it will provide focus.

The new organizational structure will enable Cisco SDN to proactively look for additional ways to improve efficiency in managing service support.

In this role, operational engineers are called upon to incident badge to investigate that network to locate specific issues quickly, which in turn reduces the impact time and helps the department to meet the SLA goals.

This concept focuses on the strategic vision that will drive the organization's future, including both operational and operational work.

They will start the process with this steps:

What should Cisco do?

*How Cisco IT  
Implemented  
Organizational  
Change.*

**CISCO**  
CISCO

This company uses a Silo  
Perspective Structure with their  
employees doing both  
implementational and operational  
work.

The problem was lack of communication and focus in the IT's Network and Data Center Service (NDCS) department that leads to a bad service support to the clients, which in a company of service is a very severe issue.

The problem was lack of communication and focus in the IT's Network and Data Center Service (NDCS) department that leads to a bad service support to the clients, which in a company of service is a very severe issue.
