

International Business Issues

Thecasesolutions.com

- 1. Jurisdiction
- 2. Intellectual Property
- 3. Taxes and Securities
- 4. Internet-Specific Issues

1. Jurisdiction

Jurisdiction is a primary issue for any international business, including e-business. This refers to the ability of a legal body to make decisions and force an individual or business to abide by them. Legal systems vary by country, although there can be similarities.

For example, if a business is based in the United States and has a website that is accessible from other countries, the business may be subject to the laws of those countries as well as the United States.

2. Intellectual Property

Intellectual property is a legal right that protects the creations of the mind, such as inventions, literary and artistic works, and designs.

Intellectual property is a legal right that protects the creations of the mind, such as inventions, literary and artistic works, and designs.

3. Taxes and Securities

Trading securities in a business may be illegal without the prior approval of the target country's exchange commission or similar legal body.

This means that selling securities may require the consent of a target number of different authorities.

Taxation can represent an equally complex situation, both in terms of laws levied on the business, but also sales taxes that various countries may or may not impose.

Internet-Specific Issues

Internet-specific issues are those that arise from the use of the Internet in business. These issues can be divided into two main categories: legal and technical. Legal issues include jurisdiction, intellectual property, and taxation. Technical issues include data privacy, security, and accessibility.

THANK YOU

1. Jurisdiction

Jurisdiction is a primary issue for any international business, including e-business. This refers to the ability of a legal body to make decisions and force an individual or business to abide by them. □ Legal systems vary by country, although there can be similarities.

For example, if a business is sued in one country and that country's judicial body makes a judgment, the business's home country may or may not recognize the judgment, depending on how its own laws are structured.
