# **What is a mixture?**

A mixture is a substance made by combining two or more different materials in such a way that no chemical reaction occurs. A mixture can usually be separated back into its original components. Some examples of mixtures are a tossed salad, salt water and a mixed bag of M&M's candy.

# Heterogeneous

A heterogeneous mixture is a mixture that is not uniform consists of two more substances mixed but not chemically combined. (examples include: sand, oil in water, trail mix)

# Homogeneous

A homogeneous mixture is a mixture that has all the same particles. Everything has the same composition. Usually one substance dissolved into another.  
Kool-Aid is a homogeneous mixture.
