Just plug it in!

Definitions of Important Terms

Substitution method - solve an equation for one variable, then substitute that solution in the other equation, and solve.

No solution - no answer to the equation.
Impossible for the equation to be true.

Infinite solutions - any value for the variable would make the equation true.

Steps for Substitution

- First, choose a variable to isolate.
- Second, after you find what that variable equals you plug it into an original equation.
- Third, solve for the remaining variable.
