

Internet Of Things

TheCaseSolutions.com

Hi, I'm Bryan!

Limerick Campus Innovation Core Team

Internet Of Things

TheCaseSolutions.com

What is this Internet of Things (IoT)?

- Refers to the **extension** of the Internet to the **physical** world
- Internet connectivity **moves beyond** traditional devices like desktop and laptop computers, smartphones and tablets to a diverse range of devices and **everyday things** that utilize embedded technology to communicate and interact with the external environment, all via the Internet (Basically to where all **devices** are interconnected).
- It will **transform** physical industries as **everyday objects** become increasingly '**connected**'.
- It will drive new opportunities and new business models. There is a '**connected economy**' that's coming.
- Many devices in the IoT will be **machine-to-machine** 'things', such as sensors, tags, widgets ... they won't even have screens. 'Invisible IoT'
