

1. Mammal Extinction

Thecasesolutions.com
• 25 % of the world mammal species are at risk of extinction.

- Crucial areas:
 - Southeast Asia
 - Central Africa
 - Central and South America

2. The Ocean Dead Zones

Thecasesolutions.com

Characterized by lack or completely zero oxygen.

Since 1960, the number of dead zones has doubled every 10 years

7. Population Explosion

Overpopulation – is defined as the condition of having more people that can live on the earth in comfort, happiness and health and still leave the world a fit place for future generations.

Ostertel: Asia Pacific

3. Collapsing Fish Stock

Fisherman have been pulling such a huge quantity of fish from the oceans that we're heading toward a global collapse of all species currently fished – possibly as soon as the year 2048.

6. CO2 Levels in the Atmosphere

Due to human activities, The amount of CO2, released into the atmosphere has been rising extensively during the last 150 years.

4. Destruction of the Rain Forest

Rainforest is home to 50% of all plants and animals on earth.

It is the earth living lungs- It breathes in carbon dioxide and breathes out oxygen.

5. Polar Sea Ice Loss

Is melting of sea ice at an unprecedented rate and it's not slowing any sign of slowing down.
