Water Funds: Financing Nature's Ability to Protect Water Supplies

TheCaseSolutions.com

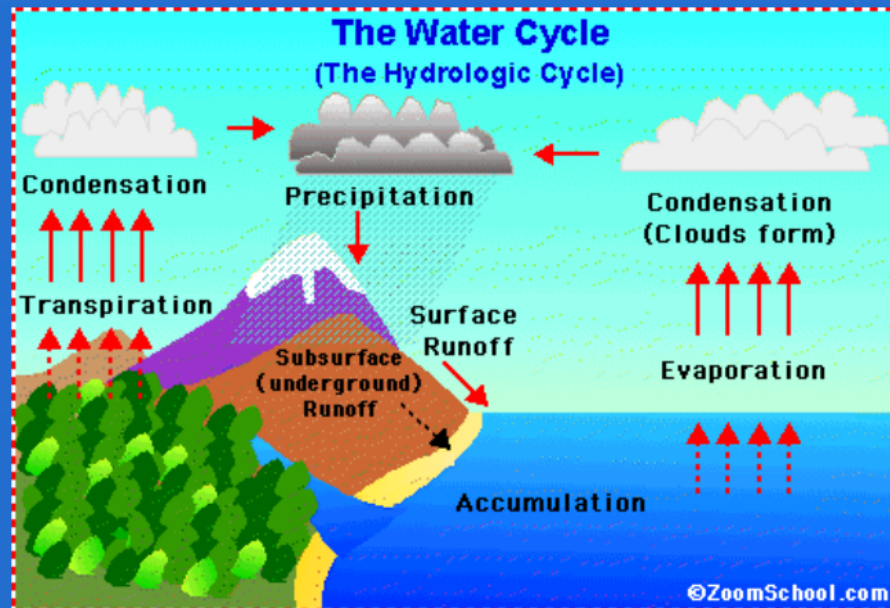

Intro

Many experts believe we are running out of fresh water due to the immense consumption rates of our ever-growing population. Don't worry, we don't have to panic now... but we should still conserve water!

TheCaseSolutions.com

The Hydrologic Cycle

The hydrologic cycle describes the movement of water above and below the earth's surface

Water Pollution

Pollution of water is an issue for our water supply, even our own Great Lakes are called "chemical soup" because of the high chemical content. In fact, over 360 different toxic chemicals have been identified, including mercury.

Types of Pollution

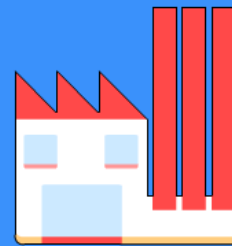

TheCaseSolutions.com

TheCaseSolutions.com

Chemical Pollutants

- Consists of chemicals released into water bodies
