During the days before computers were available to everyone, typists had to manually correct typos often leaving unpleasant marks on their paper.

When they wanted to produce clean and perfect copies, they would have to crumble the paper with typos, throw it away into the bin, and retype the entire document on a new sheet of paper.

Computers together with the Internet help increase the speed of sharing and passing information. Instead of waiting for the postman to bring the letters containing our messages to our recipients, we can e-mail or send instant messages to them. In addition, we can also attach images, videos and audios to our messages. Knowledge can also be obtained faster with the Internet. (www.insidetechnology360.com)

Before the Internet was available, a person had to travel to the library or a bookstore to get a book if he or she did not have a copy of it in hand. Today, he or she can use the search engine to look for the information. As computers become more powerful, life will be much easier than now when new applications are added to them.

The computers have played a major role in most of what we know about ourselves and the universe. The satellites, the telescopes and almost all the research tools make use of computers in some or the other way. The huge calculations required for space science, safe communication between scientists, storage of all the gathered information are some of the computer uses in science and technology.
