

Contribution

By having my thesis work done with analysis in megaprojects or megaprojects and risk, I would like to contribute my effort to interpret the outcome of megaprojects result in terms financial language and what lessons can be taught through studying the projects.

TheCaseSolutions.com

Main issue

It is not the size or scope of the megaproject that makes it complex but rather the time factor. The set in for four years, megaprojects take upwards of 10 years to become fully operational and they are all subject to significant change. But it's the fact that technology change, market volatility and other factors can alter the rules of the game. Ongoing uncertainty, changing and adding here compelling to the construction and delivery of megaprojects.

Purpose/What it is for

Megaprojects often bring mega challenges. Cost and time overruns, obsolete technology, shifting political support and turbulent economic conditions are all frequent distractions that emerge from megaproject delivery. To have success, we must measure the time taken in financial terms. Participating or clearing the megaproject delivery. How inefficient or harmful it would be in economy of Mongolia. This is for to have a side to side view of failure of delivery and successful implementation of project. My purpose to find out what sum of money will be circulated behind these 2 obstacles.

Mega projects in Mongolia

- New railway
- The new railway project is a mega project of political, economic and social impacts in Mongolia.
- According to the current estimates, the required investment for the project is 2.2 billion USD.
- In the past, the project has been approved and the withdrawal from the Development Bank of Mongolia. It of course, some 1.2 billion USD has been transferred to the project account.

Motivation

Huge budget, massive foreign debt, under-served infrastructure, low quality of environment. As a student of Mongolia, I want to dig more about the infrastructure and underdeveloped megaprojects. Moreover, I would like to examine the challenges, opportunities, risks and complexities facing those involved in creating and operating these important assets.

TheCaseSolutions.com

Introduction

A megaproject is a project that is more than \$1 billion in value, that has a long duration, and that is subject to significant uncertainty. It is a project that is more than \$1 billion in value, that has a long duration, and that is subject to significant uncertainty.

TheCaseSolutions.com

In The Future

In the future there will be ways to extend the life of the rail which will help decrease the cost of delivery. The 1.2 billion USD is not the total amount for many years to come. Currently they need 1.2 billion USD of 2016, but that's expected to rise to 1.7 billion USD by 2019.

THE END
