Why do I need a Firewall?
Thecasesolutions.com

If you are the type of person that likes to be online, then you need a firewall. A firewall is a program that runs on your computer and helps to keep your computer safe from the Internet. It prevents any bad people from getting into your computer. It also prevents any bad people from getting into your computer. It also prevents any bad people from getting into your computer.

Where on the Internet are there Firewalls?
Thecasesolutions.com

There are plenty of places where you can download a firewall for free. However, there are other places where the website seems safe, even though it's not. When you enter a website where you want to download a firewall, check the web address and make sure it says "https" and not "http". The "s" assures you that you are on a safe website where there are no viruses that can enter your computer.

What exactly is a firewall?
Thecasesolutions.com

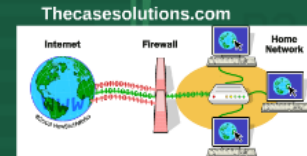

Firewalls are software programs or hardware devices that filter the files or information that goes into your computer or your network through an internet connection. It filters through the data flow & blocks files which they feel are harmful to your network or computer system.

- most firewalls can be customized to let files in that are usually blocked

What do Firewalls do?
Thecasesolutions.com

Firewalls protect your computer from malicious online viruses. They detect any outgoing/inggoing traffic, and block any messages that don't meet specific security criteria. If you receive a virus, whoever sent it now has access to your computer and everything in it and can delete/erase any personal information about you. They can see credit card information, e-mails you received/sent, passwords to websites you have logged onto, etc.... and can lead to identity theft.

Firewalls can be found online. Although, keep in mind that some firewalls are more powerful than others. There are many firewalls that are up-to-date with their ability to keep hackers and viruses from accessing your computer, while others are out-of-date with their technology. If you would like a powerful firewall, you can look up some of the bigger companies that make computer technology. (A good example would be Microsoft, they have strong firewalls/virus protection software you may download at any time.)
