What Are Greenhouse Gases?

- Greenhouse gases are chemical compounds found in the Earth's Crust and allow the gases to enter freely.

How the Greenhouse Effect Takes Place

SUN

Thecasesolutions.com

- The sunlight hits the earth's surface and is reflected back into space as Infrared Radiation (heat).

EARTH

Thecasesolutions.com

- The amount of energy from the sun to the earth's surface should be the same amount that is refracted back into space.

Infrared radiation
emitted from the

Thecasesolutions.com

- The Infrared Radiation is absorbed and the heat is trapped in the Earth's atmosphere by the Greenhouse Gases.
