

Tale of the Lynx (B)

Food Chain Of A Lynx

Thecasesolutions.com

The food chain of a lynx starts with the producer being grass. The snowshoe hare will then eat the producer being a primary consumer. The lynx will then consume the snowshoe hare and gets its food. The lynx is a secondary consumer. There is no tertiary consumer of the lynx. There is a big cause of death. Trapping is the #1 death of lynxes.

Diet of The Lynx

Thecasesolutions.com

Lynx's typically feeds on snowshoe hares which is 60% to 97% of its diet. In summer they'll feed on rodents and birds. Sometimes it'll hunt deer and wolf.

The Lynx's Niche

Thecasesolutions.com

Mostly a carnivore, often a predator. Hungry Lynx's often consume 1 hare per day. Lynx's really needs the snowshoe hare because it is its main source of food.
