# The Maple Lane Driveway Paving Project

Thecasesolutions.com

**Objectives:**

- To build roads in easy and cheap ways.
- To use suitable materials for construction of roads.
- To provide easy movement of vehicles.
- To minimize the road accidents.

Thecasesolutions.com

**Introduction**

Pavement is the abraded surface material laid down on an area intended to support vehicles or the traffic load on surface structure.

In general, suitable courses will give the user some structural support, but these surfaces have rarely been reduced to suitable or superior.

There are two types of pavements:  
Rigid pavements  
Flexible pavements

Thecasesolutions.com

**Flexible pavement**

In case of flexible pavement, surface course, underlying base and sub-base course.

Flexible pavement structure is typically composed of several layers of materials.

Each layer breaks load from the stone layer upwards, and load is passed on these to the next layer below.

## *Objectives:*

To build roads in easy and cheap ways.

To use suitable materials for construction of roads.

To provide easy movement of vehicles.

To minimize the road accidents.

[Thecasesolutions.com](http://Thecasesolutions.com)

# *Introduction*

Pavement is the durable surface material laid down on an area intended to sustain vehicular or foot traffic, such as road or walkway.

In the past, cobble stones and granite setts were extensively used, but these surface have mostly been replaced by asphalt or concrete.

There are to types of pavements:

Flexible pavement

Rigid pavement

[Thecasesolutions.com](http://Thecasesolutions.com)

# *Flexible pavement*

Is composed of bituminous material surface course, underlying base and sub base course.

Flexible pavement structure is typically composed of several layers of materials.

Each layers receives loads from the above layer, spreads them out and passes on these loads to the next layer below.
