What is tracking system?

The tracking system is known as (GPS tracking the location and manage our vehicles with even as Cases of theft, accident occur and be notified when unexpected events such as theft, accident occur and be notified when purposes that are useful every day, not just when a theft is attempted.

What is tracking system?

known as (GPS) system allows us to track the location of a mobile phone and be notified when an accident or theft occurs. It is used in many cases as a security measure, such as in the case of a stolen vehicle. It can also be used to track the location of a person or a vehicle every day, not just when a theft is attempted.

Updating the location of the armed vehicle every 30 seconds with showing the location and the status of the engine.
