Panthers

Habitat: Forests, Prairies,
and Swamps

Panthers are solitary animals who do venture hundreds of miles from their home range. Panthers are usually active at night and communicate by chirps, peeps, whistles, purrs, moans, screams, growls, and hisses.

Diet

Panthers diet mainly consist of white-tailed deer while these cats also enjoy feral hog, rabbit, raccoon, armadillo, birds, and the occasional house pet.

Known as a carnivore and are tertiary

Interactions & Behaviors

Panthers generally react to one another in a neutral relationship as they do not hurt or benefit from one another, this is known as commensalism.

The behavior of these wild cats are fueled by the instincts to survive and reproduce. They hunt at night, live in secluded areas (in heavily populated areas) and are aggressive towards any opposing threats.

Plants are not usually in the panthers diet, however if they do have an upset stomach these animals eat vegetation to soothe any pains.

Trophic Level

Environmental Impact

Panthers have a very limited environment impact. They consume animals such as white-tailed deer and considering the fact that these amazing cats are becoming extinct, white-tailed deer population could increase.

The Wild Cats of Florida are very low key.

Economical Impact

In the economy, panthers are known as one of the National Mascot for the Florida Panthers Hockey team. Economical they do not affect any sort of group particularly, however panthers are being protected by local wildlife to preserve the species.
