

Production and Cost

Introduction

The 'Production and Cost' case study is found on thecasesolutions.com, aims at providing a detailed analysis of the operations management and particularly focuses on the aspects of cost control within an organization. This case presents useful information for the effective management of operations, increase in productivity, and decrease in costs – factors that are essential for survival in the modern world.

Understanding Production and Cost

In any manufacturing or service providing organization production and costing are the two most critical functions. This entails that proper management of production and its sub processes guarantees utilization of all available resources; cost control on the other hand ensures that organization's profitability is enhanced. The case therefore reinforces the importance of analysing the link between production scale and cost on the one hand, and price positioning strategies on the other.

Employee Training:

Training of employees to develop better and more effective skills which leads to effective performance.

Supplier Relationships: Establishment of good relations with suppliers to try and get to agree on better prices and can supply the company with the required raw materials.
